

# REVITALIZING ETHNIC HEALTH INFORMATION SYSTEMS

in conflict-affected southeast Myanmar

## HUMAN, ORGANIZATION, AND TECHNOLOGY-FIT (HOT-FIT) FRAMEWORK

Ethnic Health Information Systems (EHIS) in conflict-affected southeast Myanmar face challenges due to armed conflict, resource limitations, and cultural and linguistic barriers. Adapting global best practices can inform efforts to rebuild inclusive EHIS in southeast Myanmar.

**Research Question** : What are the determinants of success and failure of EHIS in conflict-affected ethnic communities in Southeast Myanmar?

### Methodology

The study includes three phases:

- Developing a search strategy, inclusion and exclusion criteria to identify relevant studies.
- Conducting data extraction and analysis
- Synthesizing the data by identifying themes, patterns, and gaps in the literature.

## RESULTS

- **Community engagement** is essential for the success of EHIS. Communities need to be involved in the design, implementation, and monitoring of these systems.
- EHIS require **resources** such as funding, equipment, and trained staff.
- **Improving data collection and management** is essential for strengthening EHIS.

## CONCLUSION

- **Collaboration** between ethnic groups, agencies, and development partners is important.
- Systems need to be **flexible** and adaptable to changing needs.
- There is a need for **innovative solutions** to the challenges facing EHIS. Developing new technologies or adapting existing technologies to meet the specific needs of the population.
